Title : Write and execute PL/SQL stored procedure and function.

Objective :

Write and Execute PL/SQL stored procedure and function to perform a suitable task on the database.
Demonstrate its use.

Theory :

Function :

Function, in computer programming language context, a set of instruction which takes some input & performs certain tasks. In PL/SQL, a function returns a value.

✓ Procedure :

Procedure, as well, is a set of instructions which takes input and performs certain task. In SQL procedure does not return a value.

TVSGB, LONI

Example :

DECLARE

a number;

b number;

c number;

PROCEDURE findMin (x IN number, y IN number,
z OUT number)

IS BEGIN

IF $x < y$ THEN

z := x;

ELSE

z := y;

END IF;

END;

BEGIN

a := 23;

b := 45;

findMin(a, b, c);

dbms_output.put_line('Minimum of (23, 45):' || c);

END;

Output : Minimum of (23, 45): 23

Conclusion :

Thus, We have executed PL/SQL functions to perform task on the database.
